A Message From the Commissioner

It gives me great pleasure to introduce the 1989-90 issue of the Alabama Agriculture Statistics bulletin. This marks the first issue to be published by the Agricultural Statistics Service during my tenure as Commissioner of the Alabama Department of Agriculture and Industries.

With this issue, we have chosen to highlight the importance of cotton to Alabama's agricultural economy. Yes, cotton is well on its way to becoming "King" again in our fair state. We are seeing a definite resurgence of this valuable commodity.

In 1990, Alabama farmers planted 380,000 acres of cotton. In 1991, the planted acreage jumped to 430,000. If realized, this marks the single largest planting of cotton in the state in 15 years when, in 1976, Alabama farmers planted 440,000 acres.

This resurgence may be attributed to many factors, not the least of which is simply a matter of economics. The profit potential for cotton at planting time over other crops was most promising. We have suffered severe wet weather this year, however, which may impact the final yield and economic outcome. This is the nature of farming.

It is my hope that during my tenure as Commissioner, we are able to showcase other valuable agricultural commodities in subsequent publications. All aspects of agriculture, from row crops to poultry and livestock, are important in this $3.3 billion business.

Statistical data such as that presented in this publication are utilized in the agricultural sector to calculate risk factors that may influence crop and livestock production and to plan planting, feeding, breeding and marketing programs. Data are needed by agribusiness, trade and financial organizations to determine inputs, resources, transportation and storage needs. Also, decisions that impact the development of government programs and policies that impact agriculture are often based on such data.

This publication was complied through the cooperative efforts of the producers who provide the information and the Alabama Agricultural Statistics Service, a cooperative effort of the U.S. Department of Agriculture and the Alabama Department of Agriculture and Industries.

A.W. Todd
Commissioner

State Statistician

A.W. TODD
Commissioner of Agriculture

FOREWORD

The Alabama Agricultural Statistics Service, USDA, in cooperation with the Alabama Department of Agriculture and Industries, is pleased to present the 1990 edition of the Alabama Agricultural Statistics. This annual bulletin is thirty-third in a series dating back to 1948. This issue contains the preliminary data series of state and county estimates for 1990 and comparable data for 1989.

This publication is the result of the continued cooperative assistance provided by many Alabama farmers, county extension agents and specialists, and agribusiness people. We express our thanks to all of these individuals who voluntarily provide the basic data about this state's agriculture. They can be assured that we keep our pledge of confidentiality of an individual's reported data.

The estimates in this bulletin are developed from scientifically-designed surveys that use sound sampling and estimating procedures. Data is collected from individual farm operators by mail, phone and/or personal interview. Thanks is extended to our NASDA (National Association of State Departments of Agriculture) enumerators who work with the Alabama farmers in collecting this data. The data is entered into the computer for data validation, statistical analysis and summary. The Agricultural Statistics Board in Washington, D.C. accesses the state data for reviews and releases the information at a pre-specified release time. This publication contains that summarized released data.

Thanks and appreciation go to Commissioner A.W. Todd who has been most supportive of this office. County estimates for many commodities are only possible because of the funding provided by the Alabama Department of Agriculture and Industries. The publication of this bulletin is made possible by funds provided by Commissioner A.W. Todd.

Thanks go to Gale Norman for help in designing the cover and helping with this publication. Also, our thanks to the Autauga cotton farmers who allowed the cover pictures.

I want to recognize the office staff of the Alabama Agricultural Statistics Service for their devoted efforts in providing quality agricultural statistics for the State of Alabama. Please know I truly appreciate them - THANKS.

Sincerely,

Duffy Barr

Duffy Barr
State Statistician

1990 WEATHER SUMMARY FOR THE STATE OF ALABAMA

ALABAMA'S WEATHER...AN OVERVIEW

The weather for the year was warmer than normal. The average annual temperatures were 2 to 4 degrees above normal. During January, February, and March, the average monthly temperatures were as much as 4 to 9 degrees above normal. Temperatures finally were 1 to 4 degrees below normal in April and May but then continued to average 1 to 4 degrees above normal for the remainder of the year. Temperatures between 100 and 104 occurred in the State during July, August, and September. Only the extreme northeast and coastal areas of Alabama failed to reach the century mark during the year. The coldest lows were in the teens north to low and middle 20's central and south during December. Rainfall was plentiful from January through March, with monthly totals some 1 to 4 inches above normal. Flooding occurred across the south during March. Extended dry periods occurred in April with below normal rainfall. The below normal rain amounts continued in the eastern counties during May, with near normal totals elsewhere over the State. The rain pattern became mixed in June, with many locations recording below normal rain but local areas recording about normal amounts. Below normal rainfall set in across the State in July and continued through the remainder of the year. September was a particularly dry month. Flooding occurred over the Tennessee Valley just prior to Christmas. The number of rain days ranged from 110 to 125 over the north to less than 90 days across the Wiregrass area of the southeast. On an annual basis, the rain totals were 65 to 70 inches in the northern third of the State, and about 15 inches above normal. Southeast Alabama reported 40 to 45 inches of rain during the year, which was 10 to 15 inches below normal while in the southwest annual totals were 50 to 60 inches, which was 2 to 6 inches below normal. No tropical storm system became a threat to the State.

The average monthly temperatures for **January** were 4 to 9 degrees above normal. Daily highs reached around 70 across the Tennessee Valley to the middle and upper 70's central and south. The coldest lows reached the low 20's over most of the State except for around 30 along the coast and some teens in colder areas of the north. Rain was reported on 10 to 15 days during the month with most totals between 7 and 10 inches, which was 2 to 4 inches above normal.

February continued the trend of temperature well above normal. Daily highs reached the low and mid 70's across the Tennessee Valley to near 80 central and south. Nighttime temperatures only fell to the low and middle 20's in the extreme north with generally low 30's central and south to upper 30's near the coast. Rain was reported on 10 to 17 days, with totals generally between 7 and 10 inches which was 1 to 4 inches, above normal. Most locations had received 150 to over 200 percent of normal rainfall for the calendar year.

The above normal temperatures continued in **March** while rain amounts ranged from above normal over all but the southeast, which received below normal rain amounts. The average temperatures were 2 to 5 degrees above normal, with highs in the low 80's north to middle 80's elsewhere. The coldest lows were in the middle 20's north, with low 20's in colder locations, to around freezing over the remainder of the State. Precipitation was reported on 11 to 14 days across the north and 6 to 8 days central and south. Rain totals in the extreme southwest were 5 to 11 inches above normal with the 12- and 17-inch totals causing flooding. In the southeast, most totals were under 5 inches which was about an inch below normal. Over the remainder of the State, rain totals varied from 7 to 10 inches, which was 1 to 2 inches above normal. At the end of the month, the annual totals were around 100 percent of normal in the southeast, 180 to over 200 percent in the extreme southwest, and generally 130 to 170 percent elsewhere.

April brought a change with below normal temperatures and rainfall. Highs warmed to the middle 80's over the State, with lows in the upper 20's north to around 40 along the coast. The average monthly temperatures were 2 to 4 degrees below normal. Rain was reported on 5 to 10 days during the month, with totals of 2 to 5 inches. These totals were 1 to 3 inches below normal. The annual rain totals were around 95 percent of normal in the southeast and 100 to 150 percent in the remainder of the State.

Temperatures continued 1 to 3 degrees below normal at most locations during **May**, with rain amounts near normal over most of Alabama. Afternoon highs in the upper 80's were common in the north and near the coast, with middle 90's elsewhere. Lows only cooled to around 40 in the north to low 50's in Mobile and Baldwin counties. Rain fell on 9 to 17 days in the north and 6 to 10 days central and south. In general, the rain totals were between 4 and 6 inches and near normal, with a few local areas recording over 8 inches. The main exception was along the extreme eastern counties where rain totals were under 4 inches and slightly below normal. In the extreme southeast, the annual totals were near 90 percent of normal, while in the rest of Alabama they remained at 100 to 130 percent.

Most reporting stations had average monthly temperatures 1 to 2 degrees above normal during **June**. Extreme highs reached the upper 90's, with 100 reported at Pinson and Brewton. The coolest lows for the month were around 50 degrees in the Tennessee Valley and ranged to the mid-60s near the coast. June rain totals varied over a wide range, with rain recorded on only 5 to 7 days during the month. A majority of locations recorded 1 to 2 inches for the month, which was 1 to 4 inches below normal, while local areas had totals between 5 and 7 inches which ranged up to 3 inches above normal. The area in the southeast with annual totals below 100 percent of normal became larger during the month, with not much change in annual figures elsewhere.

Average temperatures for **July** were around normal. However, extreme highs reached 100 to 102 degrees over all but the coastal areas where highs in the upper 90's were recorded. The extreme lows for July ranged from middle 50's in the Tennessee Valley to upper 60's in the extreme southwest. Seven to 13 days during the month had rain. Monthly totals between 3 and 4 inches were typical, with some local areas reporting over 5 inches. Most monthly totals were 1 to 2 inches below normal. The percent of normal for the annual totals remained unchanged.

August was noted for the above normal temperatures and below normal rainfall. The warmest highs reached the century mark over all of the State except for upper 90's near the coast and extreme northeast. Lows reached the upper 50's in the north and central areas during the month with middle 60's south. The average monthly temperatures were 1 to 3 degrees above normal. Rain was reported on 5 to 8 days except for the extreme southeast where rain was reported on 10 days. The 1- to 3-inch totals over the State were 1 to 4 inches below normal for the month. The annual totals in the southeast stood at 74 to 94 percent of normal and slid down to near 100 percent of normal in the remainder of Alabama.

The warm weather continued in **September**, and it was particularly dry. Afternoon highs reached the century mark over the northern half of the State with upper 90's elsewhere. Lows cooled to the upper 30's north and colder locations of the central and south, with only 50 degrees recorded near the coast. The average monthly temperatures were 1 to 4 degrees above normal. Precipitation was recorded on 5 to 7 days at most reporting stations. The totals between 1 and 3 inches were 2 to 3 inches below normal. As the growing season was reaching an end, the southeast had recorded annual rain totals of only 69 to 85 percent of normal and local areas through the central portion of the State were below the annual normal. Only the extreme western and northern counties had large areas with annual totals at or above 100 percent.

Not much change in the temperature and rain pattern occurred in **October**. Average temperatures were 1 to 2 degrees above normal. Extreme highs reached the upper 80's north to mid-90's central and south, with lows in the upper 20's north to upper 30's near the coast. The 4 to 7 days of rain provided totals between 1 and 3 inches, which were generally 1 to 2 inches below normal. The percent of annual rain received did not change much over the State.

Average temperatures for **November** were 3 to 6 degrees above normal. Highs ranged from low 80's north and near the coast to middle 80's elsewhere. Lows only cooled to generally middle 20's north, with low 20's in colder locations, to upper 30's near the coast. Rain on 5 to 8 days provided rain totals between 2 and 4 inches, which was 1 to 2 inches below normal. As a result, more areas in the central and south fell below 100 percent of normal annual precipitation. Only the extreme northwest and northern counties were still near 100 percent of the annual normal.

December provided little change except for the Tennessee Valley where flooding occurred. Across most of the State, rain was reported on 9 to 12 days with totals of 3 to 5 inches, which were 1 to 2 inches below normal. In the Tennessee Valley, rain was reported on 17 to 19 days, with totals of 15 to 18 inches being common. These totals were 10 to 13 inches above normal. Temperatures averaged 4 to 7 degrees above normal. Afternoon highs reached the middle 70's north to around 80 central and south. Overnight lows did reach the teens over the northern half of the State to middle 20's near the coast. At the end of the year, annual rain totals were 100 to 135 percent of normal over most of the northern half of the State. South of Montgomery annual totals were under 100 percent, with the lowest in the southeast at 69 to 83 percent.

CROPS REVIEW

1990

DEBBIE MOORE ADKINS

Alabama crop producers struggled through a difficult year as they dealt with above normal rainfall early in the year and extended drought conditions from mid-summer through the fall. Lower acreage, yields, and production contributed to a 5 percent decrease in cash receipts from the state's crop sales, including sales of field crops, vegetables, fruits, nuts, nursery items, and farm forest products. Cash receipts for these products totaled $761 million and accounted for 27 percent of the total cash receipts from farm marketings in 1990.

The principal crops planted in Alabama during 1990 decreased in total acreage by 2 percent from the previous year, and the value of production showed a sharp decline from $537 million in 1989 to $456 million in 1990. Soybeans showed the largest acreage decrease from 1989, dropping 130,000 acres to 470,000 in 1990. Winter wheat acreage decreased from 300,000 acres in 1989 to 280,000 acres in 1990. Corn, cotton, peanuts and sweetpotatoes all increased in planted acreage for 1990, while Irish potatoes and sorghum showed slight decreases. Planted area for oats remained at 45,000 acres for the second consecutive year.

Land preparation got a late start in 1990 as above normal rainfall prevailed during January through March. Soil moisture supplies were rated as mostly surplus during March but declined to mostly adequate by mid-April. Despite delays from rain and local flooding, spring plantings progressed ahead of normal for most crops as April and May brought dryer weather to the state. The exception was cotton planting which was behind in mid-May. Much of the cotton acreage in the northern part of the state had to be replanted due to more prevalent rainfall and wind damage in the Tennessee Valley area. Several late spring freezes hurt the peach crop which had an early bloom set due to an unusually mild winter. Many peach orchards in the northern part of the state were completely wiped out. Farmers began harvest of their first hay crop in early May and completed harvest by early July. Seeding of most major row crops progressed ahead of schedule due to favorable weather conditions during May and June. Below normal rainfall during June depleted topsoil moisture supplies as ratings declined from adequate to mostly short by month's end. The dry weather provided excellent conditions for harvest of small grain crops with the majority of the winter wheat harvest completed by late June.

Extremely hot, dry conditions dominated the weather for July and August and took a toll on crops and pastures. Topsoil moisture supplies were rated mostly short during July and mostly very short by the end of August. Many farmers utilized irrigation systems, where available, and livestock producers provided supplemental hay and pellets as pasture conditions continued to decline. Drought conditions stressed crops throughout August and resulted in cotton plants losing squares as well as bolls opening prematurely. Some corn acreage planted for grain was harvested for silage, and the more seriously damaged soybean acreage was harvested for hay. Conditions of all major crops continued to decline, especially peanuts which had ar end of month condition rating of mostly poor.

Drought conditions continued to stress crops during September but the dry weather provided excellent conditions for harvest of all crops except peanuts. Although digging was slow and difficult, progress remained ahead of schedule. Peanut harvest began in late August and was completed by late October, slightly ahead of schedule. Although acreage was up, yield and production dropped to the lowest levels since the drought year of 1980. Cotton harvest began in early September and was completed ahead of schedule in mid November. Despite an increase in planted acreage, production was down from the previous year, as was yield. Soybean harvest began in late September and was completed slightly ahead of schedule in early December. As with all the major row crops, production was down from the previous year. Soil moisture improved in October, but the majority of the state reported supplies as mostly short to very short through the end of the year. Harvest of most of the state's row crops was completed on schedule. Final yields for all major crops decreased from 1989.

The 1990 pecan crop, estimated at 5 million pounds, was the smallest since the hurricane damaged crop of 1979. The poor crop was attributed to the alternate bearing effect from the large 1989 crop, along with drought conditions for two consecutive years.

ALABAMA'S FIVE LEADING CROPS: ACREAGE, YIELD, PRODUCTION, AND VALUE, 1990 PRELIMINARY

Crop	Unit	Harvested	Yield per Harvested Acre	Production	Value of Production
		Thousand Acres	Unit	Thousand Units	Thousand Dollars
Corn for grain	Bu.	240	58.0	13,920	38,976
Cotton lint 1/	Lb.	378	476	375	123,660
Hay	Ton	750	1.50	1,125	69,188
Peanuts for nuts	Lb.	256	1510	386,560	129,498
Soybeans for beans	Bu.	440	17.0	7,480	43,758

1/ Production in 480 pound net weight bales.

1/ Beginning September 1, 1986, all stocks surveys were changed to four quarterly periods (December 1, March 1, June 1, September 1). Prior to 1986, the end of season for corn was October 1 and September 1 for soybeans.
2/ On-farm stocks plus off-farm stocks. 3/ Per program modification: Stocks estimates for oats will be made as of June 1 each year; sorghum stocks estimates, each June 1 and September 1. *Unpublished to avoid disclosing individual operations.

LIVESTOCK REVIEW

1990

RICK GEESEY

Cattle Numbers Up 3 Percent: All cattle and calves in Alabama as of January 1, 1991 totaled 1,800,000 head. This is 3 percent above the January 1 inventory last year but equal to the January 1, 1989, inventory. Total cows on hand at 960 thousand increased 5 percent from last year's inventory of 910,000 head. Beef cows were 5 percent above the 1990 estimate of 870 thousand head. Milk cows were up 8 percent. Other class estimates on January 1, 1991, are as follows: All heifers 500 pounds and over, 205 thousand head, down 2 percent; beef cow replacements, 140 thousand head, unchanged; milk cow replacements, 14 thousand head, same as last year; other heifers, 51 thousand head, down 9 percent from last year; steers totaling 95 thousand head, down 5 percent; bulls 500 pounds and over, 65 thousand, increased 8 percent; and calves under 500 pounds, at 475 thousand head, increased 1 percent from January 1, 1990.

Hogs and Pigs Up 8 Percent: Alabama's December 1, 1990, hog and pig inventory was 400,000 head, up 8 percent from last year. Breeding hogs increased to 75,000 head, up 50 percent from a year earlier. Market hogs increased to 325,000, up 2 percent. The 1990 pig crop totaled 712,000 head, down slightly from 1989. Pork producers farrowed 94,000 sows during 1990, up 1 percent from the previous year. Alabama ranked 21st among states in total hog numbers.

Milk Production: Alabama's dairymen produced an estimated 526 million pounds of milk during 1990, a marginal decrease from the 527 million pounds during 1989. Production per cow averaged 12,524 pounds, compared with 12,256 pounds the previous year. The inventory, at 43,000 head on January 1, 1991, is up 8 percent from the 40,000 on hand January 1, 1990.

Red Meat Production: The 1990 production of red meat (beef, veal, pork, and mutton) in Alabama totaled 209.0 million pounds (dress weight). This was 10 percent below the 1989 level. Cattle slaughter totaled 263,900 head, 2 percent below a year earlier. Hogs butchered, at 132,000 head, fell 35 percent from a year ago.

POULTRY REVIEW

1990

SCOTT A. HINTON

Broiler Production Up 13 Percent: Alabama broiler producers marketed 846.9 million birds in the 1990 marketing year, an increase of 96.8 million from the 750.1 million marketed in 1989. Alabama is the third-largest broiler-producing state in the United States.

Egg Production Increased: During 1990, Alabama's laying flocks produced 2,206 million eggs, up 23 million from the previous year. Hens and pullets of laying age on hand as of December 1, 1990, were 9.5 million, compared with 9.6 million in 1989. Alabama ranked eleventh nationally in the production of eggs.

Hatchery Production Up 10 Percent: Commercial hatcheries in Alabama hatched a record 1.01 billion chicks in 1990, 88.0 million more than the previous high of 921.0 million chicks hatched in 1989. Egg-type chicks hatched was 16.1 million, compared with 17.2 million in 1989. Broiler-type chicks hatched totaled 992.9 million, 89.1 million more than in 1989. Broiler-type chicks hatched accounted for 98 percent of the total hatch in the state. Alabama hatcheries shipped 105.0 million broiler-type chicks to other states in 1990, while 25.3 million were shipped into Alabama.

1/ Preliminary. 2/ Marketing year: December-November basis. 3/ Hens and pullets of laying age and annual egg production consist of commercial table egg layers, broiler breeders, egg-type breeders, and farm flocks of 400 birds or less.
*Counties not published separately to avoid disclosing individual operations.

PRICES REVIEW

1990

ANGELA M. HARDEN

Prices Received by Farmers: Prices received by farmers represent monthly and marketing year averages received by farmers at the point of first sale for all grades and qualities of the commodity sold. Points of first sale by farmers range from bulk sales at the farm to packed and graded products delivered to a local market. For crops the price refers to all sales, regardless of the year harvested. The average price concept is that price which would result from dividing the total dollars received by all farmers, before any marketing charges are deducted, by the total quantity sold. Contract sales are reported in the month of settlement, not when agreements are made. Transactions are finalized when delivery and payment are completed.

The All Commodity Index of Prices Received by Alabama farmers averaged 633 percent of the 1910-14 = 100 base in 1990, compared with 612 in 1989. This was a 3 percent increase over 1989. An increase in prices for hogs, cattle, eggs, soybeans, corn, and cotton more than offset the lower prices for wheat, potatoes, peaches, chickens, and broilers.

The Livestock and Products Index, one of the components of the All Commodity Index, was 641 percent of the base in 1990, up 3 percent from the 1989 average. Beef cattle prices averaged $69.60 per hundred weight (cwt.), up 10 percent from the 1989 price. The average price for calves increased to $90.10 per cwt. in 1990, up 5 percent. Steers and heifers averaged $79.20 per cwt., up 8 percent from last year. Hogs averaged $49.60 per cwt., showed the largest increase, up 25 percent. Broilers, at $.320 per pound, dropped by 11 percent, while egg prices were up 7 percent to $.609 per dozen. Milk sold wholesale by farmers averaged $15.90 per cwt., an increase of 7 percent from last year.

The Crop Index, the other component of the All Commodity Index, was 615 percent of the base in 1990, up 6 percent from the 1989 average. Soybean prices averaged $5.85 per bushel during 1990, while corn prices averaged $2.80 per bushel, both up by 2 percent from the previous year. Wheat averaged $3.05 per bushel, a drop of 13 percent. Potatoes, at $10.20, were down by 7 percent. Peanuts averaged $.335 per pound in 1990, up 18 percent. The cotton price of $.687 per pound showed an increase of 8 percent from the year earlier.

1/ Marketing year: December-November basis. 2/ Estimates are for market eggs instead of all eggs beginning December 1982. 3/ Marketing year: September-August basis. 4/ Monthly and season average prices based on 480-lb. net weight bale. 5/ Marketing year: August-July basis. 6/ Monthly price estimates discontinued July 1986. * Not published due to insufficient sales.

CASH RECEIPTS REVIEW

1990

JOEL D. MOORE

Farm Cash Receipts: Cash receipts from farm marketings for 1990 increased 2.5 percent from $2,773 million in 1989 to $2,844 million. Livestock and poultry products, valued at $2,083 million, accounted for 73.2 percent of the total, while crops totaled $761 million to make up the remaining 26.8 percent. Non-farm commercial timber receipts increased 12.5 percent from $266 million in 1989 to $299 million. Total farm and forestry receipts (including government payments and other farm income) increased 2.1 percent from $3,204 million in 1989 to $3,272 million. Cash receipts do not include on-farm use of agricultural commodities or other uses which did not involve a monetary transaction.

Alabama poultry and poultry products accounted for 47.0 percent of the state's total receipts from farm marketings with cattle and calves ranking second with 18.0 percent of the total receipts. Greenhouses, sod farms, and nurseries were third at 6.3 percent, followed by cotton at 4.8 percent, peanuts at 4.6 percent, farm forest products at 3.7 percent, hogs at 3.4 percent, and dairy at 2.9 percent. Sales from these eight enterprises made up 90.7 percent of the total cash receipts from farm marketings in Alabama.

Receipts from the state's broilers and eggs totaled $1,335 million in 1990, up $48 million from the 1989 total of $1,287 million. Cattle and calf returns totaled $510 million, up $18 million from the 1989 total of $492 million. Receipts from cotton, peanuts, soybeans, and vegetables (including potatoes) accounted for 52.3 percent of the crop receipts.

Cash receipts tables: In the county tables those counties with asterisks will be included in "Other Counties" to avoid disclosure of individual operations.

Definitions:

Farm Forest Products: Stumpage revenue from sales of forest products by operations classified as farms. Data provided by Alabama Forestry Commission.

Non-farm Commercial Timber: Stumpage revenue from sales of forest products by other private, forest industry and government. Data provided by Alabama Forestry Commission.

Government Payments: Includes both cash payments for feed grain, wheat, cotton, wool act, amount paid under agricultural and conservation programs, miscellaneous payments under programs such as Rural Clean Water and Disaster, as well as payment-in-kind (PIK).

Other Farm Income: Includes custom feeding services and other farm business-related income.

Cash Receipts: Represent estimates of the value of all agricultural commodities marketed or removed from the farm where produced during a given calendar year. They incorporate sales through open-market channels, placement of commodities under CCC loan, any gain (excess of market value over CCC contract value) on commodities reclaimed from CCC and any other removals. Cash receipts include sales of commodities regardless of the year produced.

Value of Production: As applied to crops, is derived by multiplying production by the estimated season average price received by farmers for that portion of the commodity actually sold. Value of production for livestock and poultry means value of the number of head on the inventory date. It is derived by multiplying the number of head by an estimated value per head as of the date.
